PROFESSIONAL SUMMARY

Cloud and DevOps engineer building on 2+ years of enterprise SAP production support at Accenture — 90+ incidents resolved per quarter at 96% SLA across 80+ environments — with DevOps skills proven through self-built, open-source projects: serverless AWS pipelines, Kubernetes deployments with Prometheus/Grafana monitoring, Terraform infrastructure, and automated CI/CD, all live-demoed on GitHub.

TECHNICAL SKILLS

Cloud Platforms: AWS Lambda, SQS, SES, ECR, S3, Elastic Beanstalk, EC2, VPC, IAM, CloudWatch

Containers and Orchestration: Docker, Docker Compose, Kubernetes (Deployments, HPA, Ingress, kustomize)

CI/CD, IaC and Monitoring: Jenkins, GitHub Actions, SonarCloud, Git, Terraform, Ansible, Prometheus, Grafana

Programming and Automation: Python, FastAPI, Flask, SQL, REST APIs, Linux, Bash, SSH

Testing and QA: Java, Selenium, Cucumber BDD, REST Assured, TestNG, Maven, Page Object Model

Cloud Operations: production troubleshooting, incident response, SLA management, access governance, audit support

CLOUD AND DEVOPS PROJECTS

Lambda Benchmark Dashboard | *Python, FastAPI, AWS Lambda* | [live demo](#)

- Benchmarked AWS Lambda across 6 memory configurations and 3 endpoint profiles (cold start, latency, cost per million requests), and identified a 512MB sweet spot: 78% lower latency than the 128MB baseline at 8% lower cost, and 49% cheaper than the max-memory tier.
- Streamed benchmark execution live to the browser over Server-Sent Events and converted raw duration matrices into a weighted cost-performance recommendation.

GreenStay | *AWS Lambda, SQS, SES, Kubernetes, Prometheus, Grafana* | [live demo](#)

- Designed and containerized a hotel operations platform (Flask/React, 9 REST endpoints) with an asynchronous SQS → Lambda → SES pipeline that decoupled email delivery from the request path.
- Migrated all 4 services to Kubernetes: Deployments with health probes and resource limits, CPU-based autoscaling (HPA), Ingress routing, and secrets kept out of version control.
- Instrumented the API with Prometheus metrics and shipped a provisioned Grafana dashboard tracking request rate, p95 latency, HTTP status mix, and pod availability.

CryptoFolio | *Jenkins, Docker, SonarCloud, AWS ECR, Elastic Beanstalk, S3* | [live demo](#)

- Engineered a secure Flask/React portfolio platform exposing 13 JWT-authenticated REST APIs, containerized with Docker and verified by 8 automated test suites run in CI.
- Automated a 6-stage Jenkins pipeline (tests, SonarCloud quality gate, image build, ECR publish, Elastic Beanstalk/S3 deploy), delivering commit-to-cloud CI/CD with zero manual release steps.

AWS Infrastructure with Terraform and Ansible | *Terraform, Ansible, AWS VPC, EC2*

- Provisioned 10 Terraform resources (VPC, subnet, internet gateway, route table, security group, EC2 with dynamic AMI lookup) to an SSH-ready instance in one *terraform apply*, generating RSA-4096 keys in-flight so no secrets enter version control; configured the host with a roles-based Ansible playbook.

PROFESSIONAL EXPERIENCE

Package Application Developer Associate | Accenture
Pune, India

Apr 2024 – Present

- Scripted the user-access provisioning workflow and automated recurring SLA/audit report assembly, cutting manual effort on those tasks by ~30% while managing access for 150+ users per quarter under enterprise security policy.
- Resolved 90+ SAP production incidents per quarter at 96% SLA adherence across 80+ production, staging, development, and QA environments, coordinating triage and escalation with cross-functional teams.
- Prepared audit evidence for compliance reviews and led shift operations: work allocation, incident awareness, stakeholder updates, and operational handoffs.

QA Automation Trainee (Tech Lead, Student Cohort) | JALA Academy
Remote

Dec 2022 – Sep 2023

- Built 5 Java test-automation projects — 17 Selenium test classes, a reusable Page Object framework, Cucumber BDD suites, REST Assured API tests, and an end-to-end booking flow — published as a consolidated QA portfolio on GitHub.
- Completed cloud, DevOps, and Python assignments (AWS, Docker, Jenkins, Linux); mentored peers and coordinated team projects.

EDUCATION

B.Tech, Cloud Technology and Information Security | Ajeenkya D Y Patil University
CGPA: **8.81/10** | *Cloud Computing, Cloud Security, Linux, Network Security, Cryptography*

2020 – 2023

Diploma, Computer Science | AISSMS Polytechnic
Score: **85.31%** | *Programming fundamentals, data structures, databases, operating systems*

2017 – 2020
