PROFESSIONAL SUMMARY

Cloud engineer working across AWS, Python, Docker, CI/CD, Terraform, and serverless workflows, with project work spanning Lambda optimization, containerized services, asynchronous messaging, infrastructure as code, and automated AWS delivery — all published on GitHub with live demos. Brings 2+ years of enterprise production support, SLA-driven incident resolution, access governance, and compliance-aware operations across high-availability environments.

TECHNICAL SKILLS

Cloud Platforms: AWS Lambda, SQS, SES, ECR, S3, Elastic Beanstalk, EC2, VPC, IAM, CloudWatch

Containers and CI/CD: Docker, Docker Compose, Jenkins, GitHub Actions, SonarCloud, Git

IaC and Monitoring: Terraform, Ansible; working exposure to Prometheus, Grafana

Programming and Automation: Python, FastAPI, Flask, SQL, REST APIs, Linux, Bash, SSH

Testing and QA: Java, Selenium, Cucumber BDD, REST Assured, TestNG, Maven, Page Object Model

Cloud Operations: production troubleshooting, incident response, SLA management, access governance, audit support

CLOUD AND DEVOPS PROJECTS

Lambda Benchmark Dashboard | *Python, FastAPI, AWS Lambda* | [live demo](#)

- Built an AWS Lambda benchmarking dashboard automating comparison across 6 memory configurations (128MB–3008MB) and 3 endpoint profiles, measuring cold starts, latency, and cost per million requests.
- Surfaced the optimal memory tier through 8 interactive dashboard views with results streamed live over Server-Sent Events, converting raw benchmarks into actionable cost-optimization recommendations.

GreenStay | *AWS Lambda, SQS, SES, Flask, React, Docker* | [live demo](#)

- Designed and containerized a hotel operations platform exposing 9 REST endpoints (Flask/React), with an asynchronous 3-stage SQS, Lambda, and SES pipeline that decoupled email delivery from the request path.
- Split the system into 4 independent services (web, API, worker, notification) and shipped a 4-stage Jenkins pipeline, modeling production-style, fault-tolerant cloud architecture.

CryptoFolio | *Jenkins, Docker, SonarCloud, AWS ECR, Elastic Beanstalk, S3* | [live demo](#)

- Developed a secure Flask/React portfolio platform serving 13 JWT-authenticated REST APIs, backed by 8 automated test suites and Dockerized services.
- Automated a 6-stage Jenkins pipeline (tests, SonarCloud quality gate, image build, ECR publish, and Elastic Beanstalk/S3 deploy), delivering end-to-end CI/CD from a single commit.

AWS Infrastructure with Terraform and Ansible | *Terraform, Ansible, AWS VPC, EC2*

- Provisioned 10 Terraform resources (VPC, subnet, internet gateway, route table, security group, EC2 with dynamic AMI lookup) to an SSH-ready instance in one *terraform apply*, generating RSA-4096 keys in-flight so no secrets enter version control; configured the host with a roles-based Ansible playbook.

SAARUSH 2.0 | *Python, Speech Recognition, Computer Vision*

- Built a voice-driven automation assistant supporting 12+ hands-free commands gated by OpenCV face authentication, with speech-to-text and text-to-speech.

PROFESSIONAL EXPERIENCE

Package Application Developer Associate | Accenture

Apr 2024 – Present

Pune, India

- Supported 80+ production, staging, development, and quality environments while managing access for 150+ users per quarter and maintaining compliance with enterprise security policies.
- Resolved 90+ production incidents per quarter with 96% SLA adherence, coordinating triage and escalation across cross-functional teams.
- Prepared audit evidence for 2+ compliance reviews and led shift operations covering work allocation, incident awareness, stakeholder updates, and operational handoffs.

Tech Lead (Student) Intern | JALA Academy

Dec 2022 – Sep 2023

Remote

- Built 5 Java test-automation projects (17 Selenium test classes, a reusable Page Object framework, Cucumber BDD suites, REST Assured API tests, and an end-to-end booking flow), published as a consolidated QA portfolio on GitHub.
- Completed cloud, DevOps, and Python assignments using AWS, Docker, Jenkins, and Linux; mentored peers and coordinated team projects and technical presentations.

Python Developer Intern | Sagveek Technologies

May 2019 – Jun 2019

Pune, India

- Delivered assigned Python development tasks on schedule, writing and testing scripts and reporting progress to the team lead.

EDUCATION

B.Tech, Cloud Technology and Information Security, Ajeenkya D Y Patil University

2020 – 2023

CGPA: 8.81/10 | Cloud Computing, Cloud Security, Linux, Network Security, Cryptography

Diploma, Computer Science, AISSMS Polytechnic

2017 – 2020 | 85.31%

Project Portfolio: Source code and live demos at github.com/AftabMulani11 | aftabmulani11.github.io/Online-Portfolio
